Rusk Component and Design  
11357 Billings Avenue  
Lafayette, CO 80026  
303-828-5747 Main Office

Dear Mr. Rusk:

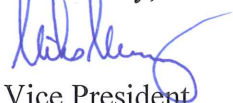

This letter is written to provide testimonial and recommendation for Rusk Component and Design. I had the pleasure of working with Rusk Component and design as Murray Drywall's Subcontractor on the Valley View Hospital Project in Glenwood Springs, Colorado. Specifically, Rusk Component and Design provided all required design documents and fabrication drawings for the projects cold formed steel trusses. With this project I worked with Brian Rusk who provided all design documents and in addition, is the president of the company.

Being a small company, there was some hesitation as to the abilities of Rusk Component and Design to provide truss components for such a large project. To prove themselves, Rusk Component and Design provided the trusses required for the mockup phase of the project for the cost of materials only. These trusses were completed and delivered on time as promised. In addition Mr. Rusk personally visited the mockup site to provide interpretation and insight into the installation for our installation crew. Contracts were then provided and signed for the main hospital component phase of the project.

Mr. Rusk provided quality truss component documents from submittal through installation of the truss components. He also attended site meetings to assist in the coordination of trades and truss components to provided helpful insight and recommendations to keep the project moving. He provided invaluable information to our field personal installing the truss components as well as official documentation for all of the truss modifications that were made over the course of the installation.

Rusk Component and Design and its representative, Mr. Rusk, provided an excellent product and followed that product up with personal and professional service beyond compare. I look forward to working with Mr. Rusk and Rusk Component and Design on future projects that require cold formed truss components. If you have any questions about Rusk Component and Design or Mr. Rusk please call me at 402-332-0466 and ask for Mike Murray.

Yours truly,

Vice President
